

Dr. Ingeborg de Wolf, ex Head of Department of Livestock & Environment (Wageningen University & Research), The Netherlands

Dr. Ingeborg de Wolf has over 25 years of practical and managerial experience in research, and policy issues within the agri-food system (especially livestock farming), companion animal sector, public health and healthcare. Driven by the need to find answers to the major societal issues of today and tomorrow and the changes this requires she has profiled herself internationally in recent years as an expert on sustainable agri-food systems. She looks at issues from an integral system and multi-stakeholder perspective, placing different developments in a broader sustainability perspective and showing how different drivers of sustainability influence each other. She studied Environmental Health Sciences at Maastricht University, Business Administration at Nyenrode University and got her PhD at the Veterinary Faculty of Utrecht University, The Netherlands. She has worked extensively with NGOs, government and industry. Until June 2022, she was head of the contract research department Livestock and Environment (WUR). Currently she is general secretary/executive director of the Health Council of the Netherlands, an

independent scientific advisory body whose task is to advise government and parliament on issues of public health and health (care) research.
